Erasmus School of Economics runs centralized, anonymous course evaluations on five-point scales. Participation is voluntary under Dutch regulations, with typical response rates of 10 to 20 percent. Instructor-level items were introduced to my courses' evaluation forms in 2024, and records from the pre-2023 system are no longer available. All figures below are taken directly from the official evaluation exports.

URBAN, PORT AND TRANSPORT ECONOMICS (MSC), 2025

Students graded the course **8.8 out of 10**, with no respondent below an 8. On the five-point scales, *I learned a lot in this course* scored **4.5**, *I was encouraged to participate actively* **4.7**, and *I received sufficient feedback about my work* **4.2**. Within this course I designed and taught the closing module on developing-country cities, including the lecture, an R-based problem set, the seminar, and the assessment. A representative comment: *"The knowledge of the professors and how they encouraged engagement with the students during class."*

BSC SEMINAR FIRM LOCATION CHOICE AND PRODUCTIVITY IN CITIES (2022–2025)

In the most recent evaluated cohort (2024), students rated my teaching individually: *"Lecturer M.E. Hees has explained the subject matter well"* scored **4.0** and *"Lecturer M.E. Hees motivated me to study the subject"* **4.1** (average **4.05**), with no respondent disagreeing on either item. At course level, *I was encouraged to participate actively* scored **4.4** and *I learned a lot in this course* **4.2**; students graded the course **7.4 out of 10** in 2024 and **7.3** in 2023. Representative comments:

- *"I learned a lot from this course, the professors were excellent, engaging and very helpful."* (2024)
- *"All lecturers facilitated a strong discussion and were very engaging."* (2024)
- *"I appreciated the professors especially, as they were really understanding and kind. I felt like I had more of a relationship with them than other professors."* (2023)

BEYOND THE EVALUATION FORMS

I was reappointed to the seminar for four consecutive cohorts (2022–2025, 100 to 120 students per cohort) and entrusted with designing the MSc module end to end in 2025. Since 2022 I have supervised more than forty bachelor's and master's theses and three internships. Supervisees have calibrated an optimal-transport-network model of Zambia and Tanzania, estimated the effects of the EU emissions trading system on cement trade with a gravity model, and in one case turned a thesis topic into a position at a major Dutch building-materials firm. Full syllabi, problem sets, and the writing guide I provide to every supervisee are available on request.
