---

Erasmus School of Economics administers centralized, anonymous course evaluations. On the five-point scale, scores above 3.5 are considered good, above 4.0 very good, and above 4.5 excellent and uncommon. Participation is voluntary, and the evaluations reported here contain six responses for the MSc course (roughly 15 percent) and 17 to 22 for the BSc seminar (roughly 17 percent). Given these response rates, I report counts and distributions where informative rather than attaching weight to small differences in means. Instructor-specific questions were added to my courses in 2024, while earlier records are unavailable following a system change. All figures come directly from the official evaluation exports.

### Urban Economics (MSc), 2025

In this foundational course of the MSc programme in Urban, Port and Transport Economics, I designed and taught the closing module on developing-country cities, including the lecture, R-based problem set, seminar, and assessment. The jointly taught course received the following evaluations from six respondents:

| | |
|---|---|
| Overall course grade | 8.8 / 10 |
| I learned a lot in this course | 4.5 / 5 |
| I was encouraged to participate actively | 4.7 / 5 |
| I received sufficient feedback about my work | 4.2 / 5 |
| Course materials were relevant and understandable | 4.3 / 5 |

All six respondents graded the course between 8 and 10 and agreed or strongly agreed that they learned a lot and were encouraged to participate actively. Students highlighted the "real world examples visualizing the ideas presented in the course" and a "high level of interactions."

### Firm Location Choice and Productivity in Cities (BSc), 2022–2025

I taught this seminar to four consecutive cohorts of 100 to 120 students. In 2024, the first cohort with instructor-specific questions, 21 students evaluated my teaching directly:

| | |
|---|---|
| Explained the subject matter well | 4.0 / 5 |
| Motivated me to study the subject | 4.1 / 5 |

No respondent disagreed with either statement. Sixteen of 21 students agreed or strongly agreed that I explained the subject matter well, and 17 of 21 that I motivated them to study it. Course-level evaluations from 22 respondents were similarly positive:

| | |
|---|---|
| I was encouraged to participate actively | 4.4 / 5 |
| I learned a lot in this course | 4.2 / 5 |
| Overall course grade, 2024 | 7.4 / 10 |
| Overall course grade, 2023 | 7.3 / 10 |

Students described the lecturers as "excellent, engaging and very helpful" and noted that they "facilitated a strong discussion." A 2023 student also highlighted the close and supportive relationship with instructors.

### Additional Evidence

I was reappointed to the BSc seminar for four consecutive cohorts from 2022 to 2025 and designed the MSc developing-country module in 2025. Since 2022 I have supervised over 40 bachelor's and master's theses and three internships. I encourage supervisees to work beyond the methods they already know when the economic question requires it, and to treat learning unfamiliar tools as part of the research process rather than a constraint on it. One thesis project led directly to a position at a building-materials firm. Evaluation reports, syllabi, problem sets, and my thesis-writing guide are available on request.
